b. Release the button, then connected finished. You can use the remote training collar

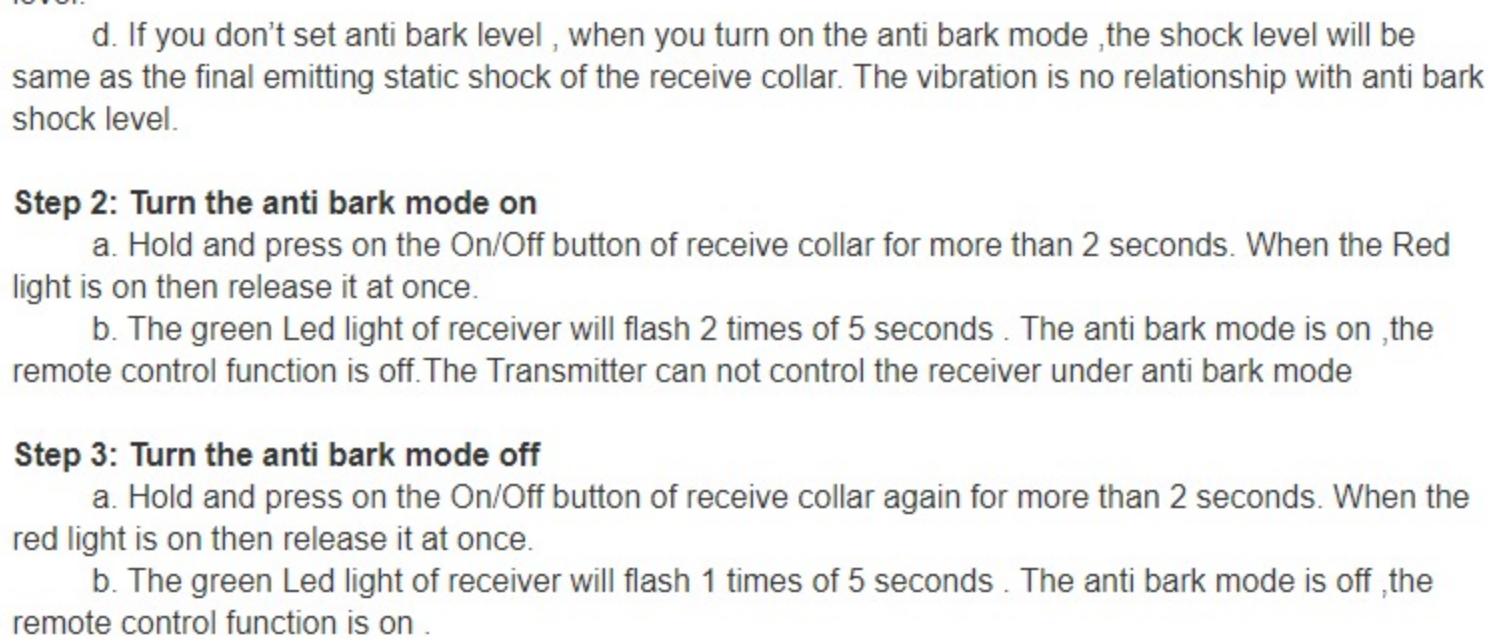

Disconnect a Receiver Collar

NOTE:Turn On the transmitter - Press on/off button for 4 seconds
Turn On the Receiver what you want to connect - Press on/off button for 4 seconds

Step 1:

a. Press and hold on the "Bell" and "Lightning" button at the same time until hearing 5 "beeps",

b. Release the button, then disconnect

Anti Bark Operation

Your remote trainer has anti bark function. Please follow the below steps to turn on the Anti bark mode.

Step 1: Choose proper shock level for anti bark

a. Press the "+" or "-" buttons to select suitable shock level.

b. Then press "Lightning" button and confirm the receive collar receive the signal from Transmitter and emit at least one shock. The receive collar will keep this shock level for anti bark when you turn on the anti bark mode at once

c. If you want to change the anti bark shock level. Please repeat above 1) and 2) to set new shock level.

d. If you don't set anti bark level, when you turn on the anti bark mode, the shock level will be same as the final emitting static shock of the receive collar. The vibration is no relationship with anti bark shock level.

Step 2: Turn the anti bark mode on

a. Hold and press on the On/Off button of receive collar for more than 2 seconds. When the Red light is on then release it at once.

b. The Green Led light of receiver will flash 2 times of 5 seconds. The anti bark mode is on, the remote control function is off.The Transmitter can not control the receiver under anti bark mode

Step 3: Turn the anti bark mode off

a. Hold and press on the On/Off button of receive collar again for more than 2 seconds. When the red light is on then release it at once.

b. The green Led light of receiver will flash 1 times of 5 seconds. The anti bark mode is off, the remote control function is on.
